

Project 2 - Sales Dashboard

Date of

Completion - 02.01.2026

1. Cleaning Raw Data

- Removed duplicated from the raw data to overcome inconsistency across different insights derivations.

2. Find & Replace

- Marital Status - **M** and **S** | Gender - **M** and **F**
- The above two fields have just single letter, this has been abbreviated according to their filed to give better understandings for stakeholders.

3. Currency

- Removed decimals for greater results and overcome messy calculations while dashboard creation.

4. Age Validation

- The raw data contains ages between 25-89 which is really tougher while creating a professional and good-looking dashboard.
- This issue has been rectified via splitting ages into three different groups: **Adolescent, Middle age and Old**. These groups has been created next to the existing Age column using **NESTED IF** function, by the below mentioned formula.
- **Formula: =IF(L2>54,"Old 55+",IF(L2>=31,"Middle Age 31-54",IF(L2<31,"Adolescent 0-31","Invalid")))**

5. PIVOT Table

- There are 4 major insights created using the PIVOT Table for good understanding of **Bike Purchase** across the whole data set

▼ Customers Average Income

- The Fields involved:
 - Income → Values
 - Gender → Rows
 - Purchased Bikes → Columns

▼ Customers Average Commute Distance

- Fields involved:
 - Commute Distance → Rows
 - Purchased Bike → Values and Column
- As a result, this insights groups and categorizes the data and give the output. But the output has inconsistency towards order, to make the resolve, rename 10+ Miles ⇒ More that 10 Miles.

▼ Customers Average Age range

- Fields involved:
 - Age Bracket → Rows
 - Purchased bike → Values and Columns
- As a result, this insight gives a detailed age classification that we have created through Age grouping.

▼ Customer Average Occupation Field

- Fields involved:
 - Occupation → Rows
 - Purchased Bike → Values and Columns
- This insights provides average purchase of bike according to people occupation.

6. Dashboard

- By inserting all 4 insights into separate sheet to create Dashboard for deeper vision.
- This dashboard has Slicer inserted to give different option to filter data according to data needs. The Slicers involved:
 - Marital Status
 - Region
 - Education
 - Occupation
